Stefan Waner and Steven R. Costenoble both received their Ph.D. from the University of Chicago, having studied several years apart with the same advisor, J. Peter May. Their paths merged when Steven joined Stefan at Hofstra University in 1987; since then they have coauthored 18 research papers as well as a research-level monograph in algebraic topology. By the early 1990s they had become dissatisfied with many of the Finite Mathematics and Applied Calculus textbooks. They wanted textbooks that were more readable and relevant to students' interests, containing examples and exercises that were interesting, and reflected the interactive approaches and techniques they found worked well with their own students. It therefore seemed natural to extend their research collaboration to a joint textbook writing project that expressed these ideals. To this day, they

This product was very helpful for me to achieve my goals. I wanted to Get a 4.0 in my college Math course and with help from this product I achieved that goal. If you are taking a Quanatative Business Methods class i would totally recoomend for you to buy this book. It is helpful beyond belief. You may have a hard time lugging around the book since it is about the size of man on steroids but it is worth it.

this is an older edition. information are good, but assignment questions are different from the newer editions.
