Customer Reviews

The "Help Your kids" series on Math, Language and Science is an excellent resource. We initially came across these in Sams club where we bought the Math and Language ones. The Science one was not available in Sams and we ordered it through .The quality of the material is excellent. Topics are covered in a concise fashion but not that brief either. We really liked the coverage of all the different topics.

This book is an excellent source of information regarding Physics, Biology and Chemistry done in elementary school in Albania. I have used it several times before helping my daughter with her

Science lessons. Examples: sound waves, magnetic poles, photosynthesis.

Very good book to add to a student's library at both Middle and High School.

Love this book-I am a High School Biology teacher and like to keep various non-text book books in my class room to help students who may be struggling with the concepts. This book has a great layout and wonderful pictures to aid in understanding and is easy to read even for students who may struggle with reading.

This book has great illustrations, yet many of the terms are still unclear to children. Its attempt to remain basic in terminology and concepts is evident, however the execution is still confusing to children, and even adults.

Perfekt size :)

This is an excellent series by DK, and this book is no exception. I highly recommend it for anyone who likes science, regardless of age, because it's just that fun to read through. THIS is what teaching is all about.

I ordered this to help me and my grandson with his science class. It is done very well with simple to understand areas he is learning this year.
