About me- SSG Infantry with 9 years of service. It's time to get a better paying job that doesn't

require me to EAT SUCK all the time SO... I used this study guide, crammed over a period of 3 days (i do not recommend this) and took the test just yesterday. I got a 68 which is the highest score of anyone i know of. The lowest score is 20, you need 40 to pass, and 50 is the mean score, 80 is the highest. So 68 is up there. The army does not release score averages/percentages, but the few guys i know have gotten between 50 and 60 (we are infantry and not all of us are the brightest i.e. knuckle dragging, club wielding, sloped forehead- you get the picture). This book made a pretty big impact- it is laid out just like the actual test. In fact i would say the practice test in the book is a little harder than the actual test (which is good). If you are short on time just take the practice tests. If you have to study one thing study the aviation portion. But just doing a run-through of the practice tests the day before the actual test really made an impact. That being said the actual test made me feel like an idiot (there were a few instances where i was shouting curses at the computer screen for asking me flight school level questions "your gonna teach me that in flight school you piece of %&*" That actually happened. The testing center was empty except for myself. I have the decency to contain myself around strangers/officers. I was tired and a baby kept me up all night (also not recommended but life choices like that are irreversible)). I was running on coffee (definitely recommended) but i was answering correctly enough to get a 68. This book is worth every penny. Now i don't need it so i'm gonna burn it in a trashcan to celebrate.

This was a really good study guide. The hidden figures part of this book was the closest to the real test as I could find. As far as Aviation Information, just download a free copy of the helicopter flying handbook on the FAA.gov website and study the ENTIRE thing. I'm pretty sure I nailed every one of those questions on the SIFT. The math portion of this book was very comparable to the actual test as well. Overall a good buy, no complaints.

This book was a waste of my money! The ONLY sections you will find worth something is the spatial appreciation section and hidden figures. Both of these are the easiest portions of the test. The other sections were not even close to representing what the SIFT test has. YouTube, aviation forums, and the FAA pub are going to help you the most! And they are all free. I would suggest you find all the sections that will be on the test and go from there. I promise you this book will not help you pass or raise your score no more than the things I listed above. I passed the first time due to a tutor and YouTube. Make sure you know basic knowledge about flight and controls. Do not waste your money on this book!

Bought this book with 5 days to study for the exam. Studied each section for about an hour maybe more then the day before the exam I went over the tough sections. Passed the test with a mid 50 score. This book was definitely helpful. I would recommend it for anyone worried about the structure of the test. Test questions in this book are very similar to those on the actual exam.

I used this for a couple of weeks to prepare for the SIFT. The Aviation section, especially the practice questions, did not reflect what was on the SIFT. Overall I feel like it didn't help me significantly going into the SIFT.

This test book was a great primer for that the SIFT contains and the first section of the book that gives a brief overview of all the sections is especially valuable. My only recommendation would be to have some full length practice tests included in the book or as an online simulator but either way it's a good primer.

Good product. Helped a lot.

I think the study guide was designed to help raise SIFT scores, I am confident that this study guide will be and has been successful with helping myself and many other achieve their desired score.
