Customer Reviews

NICHOLE VIVION is a science teacher at the Nightingale-Bamford School in New York City.

Should be used as a secondary source of information and review. The amount of terms and concepts, and the information per term is not comprehensive enough. Wrong information in some cards, which makes you doubt the veracity of the rest of the cards. Making notecards take time, so these are worth it if you don't have that much time. And they are smaller than what I thought! Makes our difficult to add info if you want to.

Good

Flashcards are always good to study from.

If you have a lot of time to study this is a great resource. I used it as a supplemental resource for my DAT biology studying. The cards for the most part are well written.

Not as good as I expected. I thought it would be similar to the AP Biology Cliff notes, but it isn't...

Not as detailed as I needed them to be. Very generalized and missing a lot of important details from the AP Cliff's Biology book. I understand you cannot put an entire book on note cards but what I considered to be some of the more pertinent information for test questions, especially any DAT takers, was absent.

The Cliffnotes Flashcards are definitely a good help for everyone who likes to study with flashcards! For me it was not a good help, because I, personally, don't use flashcards that much.. Apart from that, there were just too many to remember.. 950 with different facts, definitions or explanations on them.. My advise is to buy these flashcards in the beginning of the year to start studying while you are learning it. As a review the flashcards are not great, it's just too much. You should use them for studying during the year! As a review the Review book I recommend the CliffNotes Review Book.
