Mind Machines (Human++ Book 1)

Synopsis

From New York Times & USA Today bestselling author Dima Zales, an intense new techno-thriller that pushes the limits of what it means to be human. With billions in the bank and my own venture capital firm, I'm living the American dream. My only problem? A car accident that leaves my mother with memory problems. Brainocytes, a new technology that can transform our brains, could be the answer to all of my problems—but I'm not the only one who sees its potential. Plunged into a criminal underworld darker than anything I could've imagined, my life-saving technology might be the death of me. My name is Mike Cohen, and this is how I became more than human. Please note: This book was formerly titled Human++.

Customer Reviews

This is a very probable vision of what could, and most likely WILL, come to pass in the near future. The author has become poised to be the new William Gibson. His stories indicate a grasp of how

this new technology can benefit the world in general, and unfortunately the military and intelligence industries even more.

Good read

This is the second series that I'm reading by Dima overall a good read. Starts a bit slow but definitely gains momentum as the story moves along. The second book IMO has a lot more excitement

Exciting and glad there will be more! Joe is my fav and hoping he is included a lot in the next bks. A little confusing with the other series titles you have similar.

Way out there Sci-fi. I enjoyed this book and would certainly read the next.

This ebook is about the introduction of a technology that can enhance the brain. A company Called Techno has invented a new product and are running trials which they are testing on volunteers when there is a break in to the facility and all the trial subjects are kidnapped, including the owners mother. The only way to find out what happened and to get the patients back is for the scientists to inject themselves with the new brainocyte technology and to follow in their footsteps. This book is brilliant in that it captures your imagination right from the start and it takes you on the journey following the kidnappers and into a world of guns and the underworld of crime in Russia. There are some very strong characters and as always a love interest. I love the fact that they used rats to show a different side of them and how lovely they can be. I enjoyed this book as the journey was full of detail and I really wanted to know what happened next. The writing was flawless and this author knows how to hold his audience. I actually came out the other end thinking that the whole process is really not a bad idea.

I found Human ++ to be an amazing book. There were twists and turns all over the place, but at no point did the reader get lost. The story line followed a path that led the reader to a fork in the road, and when you thought it would go left, the story took a hard right and some new bit of information jumped out as if to say 'Ha! You thought you knew what was gonna happen!' Other than the twists and turns, the character development was impeccable. I instantly fell in love with Ada, and if I'm honest, the rats as well. Mr. Spock became my favorite character in a matter of seconds, and that

was all based on the amazing writing. The relationship between the characters was well written as well and you could see that each person had their own individual identity which is sometimes lost in stories. What I found most interesting, though, was all the tech talk. I'm not a tech person and never will be, but I never felt like I was lost. I was able to keep up with what was going on and never felt like an idiot. I really enjoyed that because I am an avid reader and have read tech books before that made me feel like an idiot so I never finished them. Not only did I finish Human ++, but I will read the others in this series as well.

Being a network security engineer and a scripter, I loved the ideas and visualizations Dima gave for the nanotech. I can easily picture myself using them that way... Or scripting a new feature for my GUI in the same manner. I'm sure you can guess I want a brain boost now.. and I'm eagerly awaiting the sequel. I hope it is as unpredictable as the last humans and the mind benders. I did notice a few things in common like how time gets described, if that makes sense to you, but that isn't a bad thing because it is consistent, detailed, and doesn't get old. Enhance your mind and pick up the book. Lol
